

Good Shepherd Rehabilitation Hospital Where Potential Becomes Reality

From the moment you walk through our doors at **Good Shepherd Rehabilitation Hospital**, you know you have arrived someplace special. Here, our team of experts is right beside you on your rehabilitation journey, whether you or your loved one is recovering from stroke, brain injury, spinal cord injury, a major accident or another complex condition. We tailor treatment to your goals, supporting you in a healing environment made for recovery.

Modern Meets Comfort

Every detail of our hospital in Center Valley, PA, is designed for you. From calming artwork, natural light and beautiful views in every patient room to the most innovative treatments and technology available, this is a space where patients and families find the resources, strength and peace of mind to navigate recovery:

Private rooms for comfort and rest

Thoughtful design features and art to promote healing

Spacious therapy gyms with state-of-the-art equipment

Common areas to unwind and connect

Outdoor therapy garden and trail for fresh air and movement

Bistro with healthy, delicious food to fuel recovery

Peaceful meditation chapel for reflection

Indoor and outdoor lounge spaces for relaxation

Comprehensive on-site facilities, including a fully functional apartment to practice activities of daily living (e.g., showering, cooking, getting in and out of bed)

Leaders in Rehabilitation

At Good Shepherd, your personalized course of treatment is led by physicians who specialize in recovery from complex injury. Together with a highly trained interdisciplinary team, they provide expert care to help you heal and get back home.

We offer six inpatient rehabilitation programs that are accredited by the Commission on Accreditation of Rehabilitation Facilities (CARF) — including stroke, brain injury, spinal cord injury and amputation. The gold standard in rehabilitation care, our CARF accreditation demonstrates our unwavering commitment to your best recovery.

Innovation in Action

From robotic-assisted therapies to adaptive 3D-printed tools, our experts harness the latest technology to help you regain independence and move forward with confidence.

The Fleming Center for Robotics in Rehabilitation leads the way in innovation, serving as a proving ground for the advanced technologies that we bring to patients. On the first floor of our hospital, the **Empower+ education space** invites families and visitors to explore the potential of rehabilitation technologies in an up-close, hands-on environment.
